

Escape-Air Mattress® SE / SO

Evacuation ... over all terrains

What's an Escape-Air Mattress®?

The Escape-Air Mattress® is the only inflatable and versatile mattress for rapid evacuation over land and water. Because of the remarkably high wear and impact resistance, the Escape-Air Mattress® can be used on ANY terrain. Buoyancy and stability makes it well suited for rescue on water and the evacuee has maximum protection.

How does an Escape-Air Mattress® work?

Made of ultra-high-molecular-weight polyethylene (UHMWPE, UHMW) this Escape-Air Mattress® has a high impact and heavy wear-resistant sliding layer, with very low coefficient friction; that makes it unique in its class. The Escape-Air Mattress® is inflated using CO₂ cartridges. The Escape-Air Mattress® models can be used to move evacuees along the floor (min. 2 people) and have handles strategically placed on the side to allow easy maneuverability.

Advantages Escape-Air Mattress®:

- Very compact and easy to store.
- High wear and impact resistance due to UHMW sliding layer.
- Very low friction makes it easy to use on all different kinds of terrain.
- Extra-long towing straps to help operators with improved handling practices.
- Handgrips to assist with sideways manoeuvrability.
- Ready for use within seconds.
- Safe evacuation over all kinds of terrain.
- Due to large buoyancy and stability, water-rescue is easy.
- CE marked.

Our advice:

Make sure you have an Escape-Air Mattress® available when people need to be rescued. Even when you don't know what kind terrain you will encounter.
